Chapter 1

Rezultatai

Rezultatai skaičiuojami pagal formulę:

galutinis = 0.4 * dauginamasis + 0.6 * egzaminas

Duomenų apdorojimas

Programa simuliuoja studentų pažymių sistemą. Vartotojas gali pasirinkti, ar studentus su pažymiais nuskaitys iš failo, ar ranka. Irašymas ranka Pasirinkus įrašymą ranka, prašoma suvesti studento duomenis (vardą, pavardę, pažymius, egzamino pažymį ir t. t.). Viską užpildžius, į failą gaunama lentelė su studentų rezultatais. Pažymių generavimas Galima pasirinkti pažymius sugeneruoti. Tokiu atveju prašoma įvesti, kiek pažymių generuoti. Irašymas iš failo Failas, į kurį vartotojas gali surašyti studentus bei jų pažymius, pavadinimu – "kursiokai.txt". Iš jo nuskaitomi studentai.

"dauginamasis" gali būti pažymių vidurkis arba mediana. Atspausdinami abudu variantai.

Taip pat yra galimybė pasirinkti, jog pažymiai būtų sugeneruoti atsitiktinai.

2 Duomenų apdorojimas

Greičio matavimas

Taip pat galima pasirinkti sugeneruoti failus:

- kursiokai10.txt turintis 10 studentų
- kursiokai100.txt turintis 100 studentų
- kursiokai1000.txt turintis 1000 studentų
- kursiokai10000.txt turintis 10000 studentų
- kursiokai100000.txt turintis 100000 studentų

Su šiais tekstiniais failais atliekama greičio analizė, naudojant std::chrono biblioteką. Programai baigus darba, į konsolę atspausdinama lentelė su laikais:

```
Ar norite atlikti programos veikimo greičio (spartos) analizę? (1 - taip, 0 - ne) 1 Darbas su "kursiokail0.txt" užtruko: 0.015957 s
Darbas su "kursiokail00.txt" užtruko: 0.016956 s
Darbas su "kursiokail000.txt" užtruko: 0.059678 s
Darbas su "kursiokail0000.txt" užtruko: 0.320595 s
Darbas su "kursiokail0000.txt" užtruko: 3.16505 s
```

Konteinerių testavimas

Testuojami šie konteineriai

- std::vector
- · std::list
- · std::deque

Rezultatas

```
Ar norite atlikti konteinerių testavimą? (1 - taip, 0 - ne)

Atspausdintas pavyzdys

Vardas	Pavardė	Galutinis (Vid.)	Galutinis (Med.)
Aleksandras	Pavardė13	3.47	3.80
Austėja	Pavardė16	5.20	4.80
Emilija	Pavardė6	5.73	5.60
Emilis	Pavardė9	2.20	2.00
Gabija	Pavardė15	5.80	5.80
Giedrius	Pavardė17	7.93	8.40
Giedrė	Pavardė18	3.40	3.20

Programos paleidimas

Paleisti programą galima keliais būdais.

- git clone git@github.com:zygisau/Duomenu-apdorojimas.git <- jei naudojate SSH key
- git clone https://github.com/zygisau/Duomenu-apdorojimas.git <- kitu atveju
- cd Duomenu-apdorojimas
- Jei naudojate CMAKE, naudoti reikia CMakeLists.txt failą. Yra du failai skirtingose direktorijose su skirtingais project pavadinimais:
 - Duomenu_apdorojimas <- pasirinkite, jei norite paleisti programą, kuri naudoja konteinerius.
 (pagrindinėje direktorijoje)
 - Duomenu_apdorojimas_masyvai <- pasirinkite, jei norite paleisti programą, kuri naudoja dinaminį masyva (./obj_masyvai/CMakeLists.txt)

Versijų istorija (changelog)

```
v2.0 - (2019-05-19)
```

Koreguota

· Perstruktūrizuota programa

Prideta

- · Sukurtas doxyfile, su kuriuo galima generuoti dokumentaciją.
- · Taip pat iš sugeneruoto latex folderio, sukurtas dokumentacijos PDF formatas
- · Sukurti du pavyzdiniai testai

Neveikia std::list::push_back(), ties antra strategija, dėl to šioje versijoje list realizacija yra užkomentuota. Pagal cplusplus.com, "If [allocator_traits::construct](http://www.cplusplus.com/allocator-traits::construct) is not supported with *val* as argument, it causes *undefined behavior*." Tai nėra logiška, nes tipai yra tokie patys (Student klasės), tačiau vienintelė galimybė paaiškint realiai vykstantų undefined behavior.

```
v1.5 - (2019-05-05)
```

TIES STD::LIST META SEGFAULT (GALIMAI IR KITOSE VERSIJOSE SU KLASĖM)

Koreguota

· Iš buvusios studento klasės išvesta abstrakti bazinė žmogaus klasė

Pridėta

· Realizuotas rule of 5

```
v1.2 - (2019-04-27)
```

Koreguota

• Pakeistas funkcijos pavadinimas getVargsiukas() -> isVargsiukas()

Pridėta

• Pridėtas operatorių persidengimas: Rule of three, >, >=, <, <=, ==, !=

```
v1.1.1-(2019-04-13)
```

Koreguota

- Struct Studentas pakeistas į class
- · Numigruotas kodas į kitą repozitoriją

Prideta

- · Pridėtas klasės "interfeisas"
- Atlikta struktūros ir klasės spartos analizė

```
CLASS

```

v1.1 - (2019-03-23)

Koreguota

· Sutvarkytas pažymių generavimas ir lygiavimas.

```
v1.0 - (2019-03-17)
```

Koreguota

- · Pakoreguotas "READ_ME.md" failas.
- · Pakeistas studentų filtravimas, kai naudojamas std::vector konteineris. Dabar veikia greičiau.
- · Pridėta galimybė paleisti iš CMake failo abidvi programos realizacijas
- Ištrintas makefile (CMake universalesnis).

```
v0.5.1 - (2019-03-13)
```

Koreguota

• Pridėta apsauga, jei duomenų faile būtų pateiktas ne skaičius arba per mažai pažymių.

```
v0.5 - (2019-03-11)
```

Koreguota

• Pakoreguotas "READ_ME.md" failas.

Prideta

• Pridėtas konteinerių testavimas.

```
v0.4.1 - (2019-03-04)
```

Koreguota

• Pridėta biblioteka "numeric", naudojama funkcijoje. Programa veiks naudojant visus kompiliatorius.

```
v0.4 - (2019-03-03)
```

Koreguota

- Pridėta galimybė atlikti spartos analizę bei generuoti tekstinius failus.
- Pakoreguotas "READ_ME.md" failas.

Pridėta

• Pridėtas CMakeLists.txt failas.

```
v0.3 - (2019-02-23)
```

Koreguota

- Perkurta programos struktūra.
- Pakoreguotas "READ_ME.md" failas.

Prideta

· Pridėti headers failai.

v0.2 - (2019-02-17)

Koreguota

• README.md faile pridėtas versijos aprašymas.

Pridėta

- Pakeista source_vektoriai.cpp programa taip, jog galima būtų duomenis kelti iš failo bei pakeistas vaizdavimo būdas.
- Sukurtas duomenų apie studentus failas "kursiokai.txt".

```
v0.1 - (2019-02-17)
```

Koreguota

- Sutvarkytas README.md failas.
- Papildytas .gitignore failas.

Pridėta

- Sukurtos dvi programos. Viena veikia, remiantis C masyvais, kita vector.
- · Sukurtas makefile.

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Human	
Student	
Timer	

10 Hierarchical Index

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Human		 										 											15
Student		 										 											17
Timor																							23

Chapter 5

Class Documentation

5.1 Human Class Reference

```
#include <Human.h>
```

Inheritance diagram for Human:

Public Member Functions

- string getName () const
- string getSurname () const
- void setName (istream &stream)
- void setSurname (istream &stream)

Protected Member Functions

• Human (const string inputName, const string inputSurname)

Protected Attributes

- string name = "Vardenis"
- string surname = "Pavardenis"

5.1.1 Constructor & Destructor Documentation

16 Class Documentation

5.1.1.1 Human()

5.1.2 Member Function Documentation

```
5.1.2.1 getName()
```

```
string Human::getName ( ) const [inline]
```

5.1.2.2 getSurname()

```
string Human::getSurname ( ) const [inline]
```

5.1.2.3 setName()

5.1.2.4 setSurname()

5.1.3 Member Data Documentation

5.1.3.1 name

```
string Human::name = "Vardenis" [protected]
```

5.1.3.2 surname

```
string Human::surname = "Pavardenis" [protected]
```

The documentation for this class was generated from the following file:

src/classes/Human/Human.h

5.2 Student Class Reference

```
#include <Student.h>
```

Inheritance diagram for Student:

Public Member Functions

- Student ()
- Student (const Student &stud)
- · Student (Student &&stud) noexcept
- ∼Student ()
- double getGalutinis () const
- double getGalutinisMedian () const
- int getNumberOfGrades () const
- bool isVargsiukas () const
- vector< int > getGrades () const
- int getExam () const
- void setExam (istream &stream)
- void setExam (const int &sk)
- void setName (const string &name)
- void setSurname (const string &surname)
- void setVargsiukas (const bool &vargsiukasState)
- void reserveGrades (int &number)
- void pushBackGrades (int &grade)
- void setExamFromGrades ()
- void checkGradesCount ()
- void setGrades ()
- void setGrades (std::initializer_list< int > list)
- float setAverage ()
- float setMedian ()
- · void setGalutinis ()
- void setGalutinis (const double &paz)
- void setGalutinisMedian (const double &paz)
- void generateGrades ()
- bool operator> (const Student &stud)
- bool operator< (const Student &stud)
- bool operator== (const Student &stud)
- bool operator!= (const Student &stud)
- bool operator>= (const Student &stud)
- bool operator<= (const Student &stud)
- Student & operator= (const Student &stud)
- Student & operator= (Student &&stud) noexcept

18 Class Documentation

Additional Inherited Members

5.2.1 Constructor & Destructor Documentation

```
5.2.1.1 Student() [1/3]
Student::Student ( ) [inline]
5.2.1.2 Student() [2/3]
Student::Student (
            const Student & stud ) [inline]
5.2.1.3 Student() [3/3]
Student::Student (
             Student && stud ) [inline], [noexcept]
5.2.1.4 \simStudent()
Student::~Student ( ) [inline]
5.2.2 Member Function Documentation
5.2.2.1 checkGradesCount()
void Student::checkGradesCount ( )
5.2.2.2 generateGrades()
void Student::generateGrades ( )
```

```
5.2.2.3 getExam()
int Student::getExam ( ) const [inline]
5.2.2.4 getGalutinis()
double Student::getGalutinis ( ) const [inline]
5.2.2.5 getGalutinisMedian()
double Student::getGalutinisMedian ( ) const [inline]
5.2.2.6 getGrades()
vector<int> Student::getGrades ( ) const [inline]
5.2.2.7 getNumberOfGrades()
int Student::getNumberOfGrades ( ) const [inline]
5.2.2.8 isVargsiukas()
bool Student::isVargsiukas ( ) const [inline]
```

5.2.2.9 operator"!=()

20 Class Documentation

```
5.2.2.10 operator<()
bool Student::operator< (</pre>
      const Student & stud )
5.2.2.11 operator<=()
bool Student::operator<= (</pre>

           const string & name ) [inline]
5.2.2.30 setSurname()
void Student::setSurname (
           const string & surname ) [inline]
```

5.3 Timer Class Reference 23

5.2.2.31 setVargsiukas()

The documentation for this class was generated from the following files:

- src/classes/Student/Student.h
- src/classes/Student/Student.cpp

5.3 Timer Class Reference

```
#include <Timer.h>
```

Public Member Functions

- Timer ()
- void reset ()
- double elapsed () const

5.3.1 Constructor & Destructor Documentation

```
5.3.1.1 Timer()
Timer::Timer ( ) [inline]
```

5.3.2 Member Function Documentation

```
5.3.2.1 elapsed()
```

```
double Timer::elapsed ( ) const [inline]
```

5.3.2.2 reset()

```
void Timer::reset ( ) [inline]
```

The documentation for this class was generated from the following file:

• src/classes/Timer/Timer.h

24 Class Documentation

Chapter 6

File Documentation

6.1 obj_masyvai/source_masyvai.cpp File Reference

```
#include <iostream>
#include <string>
#include <iomanip>
#include <algorithm>
#include <cmath>
#include <random>
#include <ctime>
#include "../src/classes/Student/Student.h"
